Did you know that one of the most robust and durable HMI displays is a button?

With the CANEO series4x display, we combine a sleek and resilient display with an innovative sensor button.

With simple plug-and-play functionality, you can display text, numbers, and status information – all in 16 million colors. In an IO-Link environment, the CANEO series4x display integrates seamlessly into your processes.

This slim HMI display can be mounted anywhere on the machine, so error messages appear right where they happen.

The combination of display and sensor button ensures that users are not only informed but also guided to act in a targeted manner. The result: more efficient processes and reduced downtimes.

Robustness

The CANEO series4x display guarantees exceptional durability, even under challenging conditions. It effortlessly withstands shocks, vibrations, and temperature fluctuations.

Intuitive operation

The intuitive user interface ensures straightforward operation and allows you and other users to interact quickly and efficiently with machines and processes.

Application-Specific Error Display

Error messages are shown exactly where they occur, resulting in more efficient processes and reduced downtimes.
